(54) **Picture print generating method and system, and recording medium**

(57) When a picture print is generated by editing a picture image recorded on a film, the print in accordance with a customer's requirements is generated by simple operations and at a low cost. Low resolution image data of a picture image read from a film are recorded in a recording medium, in addition to software for image editing, and provided to a customer so that the customer can carry out editing operations on the picture using a personal computer or the like. When a print is ordered, editing instruction information generated by recording the operations the customer has carried out for the editing is received from the customer via the recording medium. Based on the editing instruction information, a scanner reads a film in high resolution and a printer outputs a print after automatic editing on the image data.
